

DAPI

To prepare the stock solution of DAPI, 0.1 mg of DAPI were dissolved into 10 ml of PBS. The work solution was prepared the day it was used, for this 100 μ l were added of stock solution to 900 μ l of PBS/PVP. The area where the oocytes were fixed was covered with 70 μ l of stock solution for 10 min. Then the slide was dried to remove the excess of dye. Lastly the slide was washed with PBS-PVP and carefully dried again.
